Introduction

The Department of Biology within the College of Science is one of the core academic units dedicated to preparing highly qualified professionals capable of keeping pace with contemporary scientific advancements across diverse fields of biology. The academic program is designed to provide students with a solid foundation in both general and specialized biological sciences, integrating theoretical coursework with hands-on laboratory training.

The department aims to graduate students who possess strong analytical and research skills, enabling them to explore and interpret biological phenomena at multiple levels—from molecules and cells to organisms and ecosystems. Emphasis is also placed on fostering critical thinking, problem-solving abilities, and the application of modern techniques in biological analysis and diagnostics.

In addition to its educational mission, the department places great importance on both basic and applied scientific research, addressing pressing environmental, health, and agricultural challenges facing the country. It also promotes collaborative partnerships with local, regional, and international research centers to ensure alignment with global scientific developments and to strengthen academic outcomes.

Thus, the Biology Department's program serves as a cornerstone for preparing future generations of graduates qualified to contribute effectively in education, research institutions, and sectors related to health, environment, and agriculture—ultimately supporting sustainable development and enhancing the university's role within the scientific community.

Program vision .1

a generation that is aware and creative in understanding life and living organisms, Preparing contributing to the development of biological sciences to solve environmental, health and life challenges.

Program message .2

Providing integrated academic and research programs in life sciences that enhance a deep understanding of biological processes, develop research and scientific analysis skills, and prepare ic fields, while adhering to ethical values and students for the job market and advanced academ .environmental responsibility

Program objectives .3

- 1 Providing students with advanced knowledge in the branches of life sciences (cell science, genetics, molecular biology, physiology, ecology, zoology, botany, etc).
- 2 Develop research skills through practical training in laboratories and participation in scientific research projects
- 3 Enhance scientific analysis and problem solving skills using approved scientific methodologies
- 4 Integrating modern technology in to study and research, such as electron microscopy, molecular biology, bioinformatics, and genetic techniques
- 5 Preparing students to contribute to the labor market in fields such as education, health, agriculture, pharmaceutical industries, and research centers
- 6 Encouraging innovation and scientific entrepreneurship in the fields of applied life sciences
- 7 Instilling ethical and professional values in research and handling of living organisms and biotechnology
- 8 Supporting environmental sustainability and biodiversity by linking education and research to environmental and societal issues

	BIO3646	Ecological microbiology	2	2

4th stage**Curriculum system**

Expected learning outcomes of the program 8

knowledge	
<p>Knowledge of life sciences in various fields -A1 .Classify the special needs of each laboratory analysis -A2 .The student separates all the tools for each analysis -A3 .The student can analyze the results of laboratory testing techniques -A4</p>	Knowledge and understanding -A
Skills	
<p>.The student learns about the role of life sciences with other sciences -B1 The student can identify biological activities and their relationship with -B2 .different organisms statistical results according to different statistical tests -B3 The student is able to identify the different relationships between living -B4 .organisms</p>	Subject-specific skills -b
<p>.Thinking skill according to the student's ability -A1 a High thinking skill (the student learns to think well before making -A2 (decision .Critical thinking skill in education -A3 .The skill of thinking rationally -A4</p>	Thinking skills -C

Teaching and learning strategies 9

Thinking strategy according to the student's ability (for example: if the student is able to perform analysis, he will acquire the skill of managing and organizing learn the concept of correct system) (his personal life)	-1
High thinking skill strategy (for example, if a student wants to make a good decision, it is thinking, or if he cannot think well before making the decision. If he decides without think well, or if he cannot decide, or perhaps will not decide, this means he does not have high thinking skill)	-2
is a term that refers to the) (Critical Thinking) Critical Thinking Strategy in Learning which aims to pose a problem and then analyze it logically to reach ,highest levels of thinking) . the required solution	-3
brainstorming	-4

Evaluation methods 10

(daily and monthly exams)Exams	-1
