## **Business processes through a mechanism to increase their efficiency in industrial facilities based on outsourcing**

***Abstract:** the study of problems associated with the dynamics and fluctuations of the economic environment requires the continuous development of the project, which is a complex and multifaceted phenomenon that has identified many unresolved problems, especially in light of crises. The choice of other business processes for outsourcing is an important problem, the solution of which depends on the efficiency of the development of industrial enterprises. They require continuous development and improvement of the system for organizing the activities of the enterprise, the development of new, progressive management forms and methods that can reduce and reduce the impact of negative factors on its development indicators. This is especially true for industrial enterprises. The problems of low competitiveness of industrial enterprises, limited resources for their effective performance, low level of human resources require changes in economic activity using effective management methods, high efficiency of business processes and increased competitiveness of business entities, which should become the basis for the formation of new models of economic activity of industrial enterprises on The basis of the composite model is the selection of the optimal outsourcing, which provides an increase in the efficiency of the production process of the industrial enterprise.*

***Keywords:** business processes, outsourcing, management, enterprise, competitiveness.*
