Abstract

Praise be to Allah who has granted us success in providing a simple service for our country first, and then for our dedicated faculty members who exert great efforts. The purpose of this project was to establish a system to manage the college's email, where messages were previously distributed manually. The website aims to facilitate and enhance this process by providing an efficient and responsive web interface that enables employees to sort and organize emails efficiently. The project relies on modern technologies such as ASP.NET Core and SQL Server databases. It fetches emails for the college and displays them in an organized manner, showing sent messages to each department of the college. Understanding how to use this website and the benefits it provides can ease people's tasks and reduce their problems, in addition to saving effort and time. We ask Allah to grant us success in what is good, and to succeed in our work and enjoy outstanding acceptance and appreciation. We are grateful for the efforts of our professors who supported us from the initial stage to graduation, especially Dr. Heba Amir Gaber, who supervised this project. We also express our gratitude to our companions who stood by us throughout this exciting journey. We extend our thanks and appreciation to the Information Technology College, which brought us together and facilitated this opportunity for us.
