Pharmacy Management, Analysis and Design System

SUPERVISOR Lect. Dr. Ali Hadi Hassan

ABSTRACT The core idea of your project is to create a system for managing and analyzing pharmacies and point of sale (POS). This system aims to facilitate and organize the management, analysis, and design of pharmacies and effectively track them. Through this system, users can manage inventory, track sales, generate analytical reports, organize invoices and payments, and manage both customers and suppliers. The objective of this project is to enhance the efficiency of pharmacy management, analysis, and design system and POS processes, and increase productivity and profitability for businesses and institutions relying on these operations. Additionally, the project aims to provide a seamless and convenient experience for customers, improving communication with them, thus fostering strong and sustainable business relationships.
