Abstract

The main goal is for the site to be browsed by everyone, even without an account. When a purchase is desired by an individual, an account must first be created, followed by logging in, and then having their own shopping cart saved in the database. Admin roles exist, comprising four types, each endowed with specific authority.

They are overseen by the admin root, which possesses all powers on the website. SHA1 encryption has been implemented for all account codes for both admins and regular users, and protection from web attacks such as SQL injections is ensured for any input attempted by users on the website. PHP, SQL database, HTML, CSS, and JavaScript are utilized.
