**A special System For Issuing Graduation Certificates For College Graduates Information Technology**

**Abstract**

In today's educational institutions, managing data for university students to support graduation plays a crucial role in ensuring effective management and timely dissemination. The academic information for this dissertation is in the development of the endorsement system.

The system aims to simplify the generation of graduation endorsement, enhance data organization, and improve accessibility for administrative university members. The proposed system uses technologies Modern software development, including the Typescript language and Nuxt 3 and Anonis5 offices , also Undergraduate students have difficulty obtaining graduation endorsements from various departments and colleges, which causes delays in their graduation. This project aims to design and develop an electronic system for issuing graduation endorsements for undergraduate students smoothly and automatically.
