Designing a private school management software To complete requirement of obtaining bachelor s degree Information

Abstract

Since people around the world are becoming more aware and sophisticated, and are attracted to some private schools as they are more student-oriented, the system can facilitate the student registration process and can be very beneficial to the user in terms of ease and being more visible. The school management system is very useful to the user. This application consists of the user interface that will be generally displayed on the application, ie. Basic information related to the student, such as how to maintain student data during registration. The registration officer does his work based on the presence of the student and one of his parents based on his schedule set by the school administration to fill out the registration form. This project uses C# for the school management system.
