Authors' rights protection project

Abstract

In the digital age, copyright protection is essential to safeguard intellectual property. This project focuses on developing a copyright protection project using the Laravel framework. The project aims to provide creators and authors with a robust solution to protect their copyrighted works from unauthorized use and distribution. Utilizing Laravel's powerful features and ecosystem, the project will implement various copyright protection mechanisms, including digital rights management . These features will enable content creators to control access to their works and prevent infringement Through a scientific committee.
