## ***Abstract***

In this day and age, we face many problems and errors in organizing vacations for employees, and this causes a misunderstanding between the citizen and the government departments responsible for organizing these vacations. Without any problems. In this research, we will discuss the project that we have created to reduce the percentage of errors that occur in government departments responsible for organizing vacations using this site.

The user will be logged into the site through the user interface to the site through the login interface. Employees can also browse within the site through accounts designated for each employee. The difference between the concerned department and the acceptance of time and regular vacations for the employee who has logged in. We will talk briefly about the languages, tools and methods we used to develop the project. We will also show the practical side of the project, from its main design to the steps taken to obtain the final result.
