Android system for cosmetics

Abstract

Computer and Internet)online(services have developed and developed rapidly over the past ten years. It also reduces time and costs in many aspects of human life. Nowadays, we are witnessing the rapid development of so-called cosmetic applications promoted by prominent cosmetic companies.

In this research, we design mobile applications for various cosmetics, including different sections such as hair and body care, displaying all product details and prices, as well as providing a delivery service and for different brands. We used Android Studio using Dart language and filters.
