Design A System To Determine Autism Disorder

Abstract

Autism spectrum disorder is one of the disorders that has emerged and remains mysterious to this day. It is a growth disorder that occurs in early childhood and manifests itself.

in deficiency Or inadequate social communication and interaction skills, manifested in specific and repetitive behaviors and activities.

Two scales were implemented in this work , namely the KARS scale and the M-CHAR-R2 Scale .

 I concluded that it is possible to diagnose autism early after implementing the Kaser scale and the M-CHAR-R2- scale By parents.

This system is designed in C# language.
